Index of key words

Acer (lignin biosynthesis) 75
Acetyl CoA 253
Achlya 426
Acid growth 284
Aleurone 289
Amino acid sequence 65
1-Aminobenzotriazole 182
1-Aminocyclopropane-1-carboxylic acid oxidase (purification) 65
Amiprophos-methyl 190
Anaerobiosis 474
Anthocyanidin 459
Antisense RNA 247, 305
Apical growth 426
Arabinogalactan protein 221, 525
Aryloxyphenoxypropanoate 176
Atriplex 433
Auxin 284
Auxin and elongation growth 369, 379

Biomass allocation 1
Blue light 120
Brassica (sulphate transport) 297

Calcium and salt stress 519
Calcium uptake 289
Calmodulin 289
Calvin cycle 313, 320
Carbohydrate 71
Carbohydrate metabolism 247
Carbon allocation 88
Carbon isotope ratio (gradients) 271
Carbon-nitrogen interactions 277
β-Carotene synthesis 363
Casparian band 127
Cation absorption 555
Cell expansion 221
Cell wall 58, 75
Cell wall composition 369
Cell wall (expansion, enzymes) 327
Cell wall growth 369, 379
Cell wall structure 227
Cellulose microfibril 354
Chalcone synthase (immunocytolocalization) 459
Chaperonin 32
Chilling-acclimation-related protein 346
Chlamydomonas 199
Chlorophenol red 454
Chlorophyll fluorescence 97
Chlorophyll synthesis 536
Chlorophyll-protein complex (detachment) 107
Chloroplast 253
Chloroplast envelope 231
Chlorotoluron 182

Cirsium (cell wall) 58
Cold acclimation 484
Cold adaptation 387
Coleoptile tip 120
Copper (reduction, deficiency) 555
Cotyledon 51
Crassulacean acid metabolism 271
Cucumis 51
Cucumis (cell wall expansion) 327
Cuticle 58
Cyclohexanedione 176
Cytochalasin-B 190
Cytokinin (tissue distribution, N-dependence) 511
Cytoplasmic inheritance 143
C_3-C_4 intermediate species (*Flaveria, Moricandia, Panicum*) 468
C_4 evolution 468

Defense system (suppression) 415
Dunaliella (β-carotene, oxygen) 363

Elasticity 58
Elongation growth 227
Embryo conditions (pea) 17
Endodermis 127
Endoplasmic reticulum 289
Enzyme (cell wall) 327
Enzyme expression analysis 247
Epidermis 241, 271, 369, 379
Ethylene 65
Euphorbia (photorespiration) 407
Exopolysaccharide 415
Extracellular matrix 221

Female gametophyte (ultrastructural reconstruction) 143
Ferric chelate reductase 151
Flower induction 71
Flux control coefficient 51
Frost hardening 484
Fructokinase 156, 166
Fruit 65
Fusicoccin 284

Galactose 284
Gene expression 433
Gene expression (chalcone isomerase, chalcone synthase) 459
Gene expression (organ specificity) 498
Genome (partial, transfer) 190
Gibberellic acid 289
Gibberellin 354

Glucan synthase 206
Glucomannan synthase 206
Gluconeogenesis 51
Glutathione reductase 199
Glyceraldehyde 3-phosphate dehydrogenase, NAD(P)-dependent 313, 320
Glycerate 1,3-bisphosphate 320
Glycine 346
Glycine decarboxylase (localization) 468
Glycolate pathway 407
Glycolysis 439, 446
Graviresponse (root) 546
Guard cell 44
Gymnosperm 536

Hagen-Poiseuille equation 393
Halophyte 433
H^+-ATPase 44
Heat stress 32
Heat-shock protein 346
Herbicide metabolism 176, 182
Hexokinase 156, 166
Hordeum 253
Hordeum (Ca^{2+} uptake) 289
Hordeum (nitrate reductase, CO_2 fixation) 277
Hordeum (root, salt stress) 519
Huber value 393
Hydraulic conductivity 127, 263, 474
Hypha 426

Immunolocalization 525
Internodal elongation 354
Ion transport 297
Iron (reduction, deficiency) 555
Iron uptake 151
Isoform (enzymes) 199

Leaf development 10, 498
Leaf plastochron index 393
Leaf specific conductivity 393
Lectin 241
Lepidium 491
Light and enzyme activity 277
Light climate 332
Light (gene expression) 498
Light receptor (redox dependence) 120
Lignification 75
Lolium (herbicide resistance) 176, 182
Lycopersicon 32

Magnesium mobilization 114
Malus 65
Mannan synthase 206
Medicago 415
Medicago (egg cell) 143

Membrane protein 491
Meristem 241
Mesophyll 151
Mesophyll cell 44
Mesophyll (cells, protoplasts) 10
Metabolic pathway (phosphoglycerate to acetyl CoA) 253
Microprotoplast 190
Microtubule 354
Microtubule (patterns, density) 10
Mitochondrion 32
Monoclonal antibody TOP 71 491
Movement protein 88

NaCl regulation 433
NAD(P)H-plastoquinone-oxidoreductase 25
NADPH-protochlorophyllide oxidoreductase 536
ndhH gene 25
Nicotiana 1, 10, 88, 190, 221
Nicotiana (photosynthesis) 332
Nicotiana polypeptides (23 kDa, 33 kDa) 305
Nitrate reductase (light modulation) 277
Nitrogen nutrition 1
Nitrogen status 511
Nodulation 415
Nuclear magnetic resonance 227

Oryza (growth) 354
Osmotic pressure 426
Oxidative pentose phosphate pathway 17
Oxygen exchange 407
Oxygen (reactive species) 363

Patch-clamp 44
p-Diphenol: O_2 oxidoreductase 75
Permeability coefficient 474
pH gradient (graviresponse) 546
pH (intracellular) 519
pH pattern (extracellular) 546
Phaseolus 459
Phaseolus (cell wall) 227
Phenoloxidase 75
Phleum (graviresponse) 546
Phloem 446
Phloem loading 114
Phloem sap 71
Phosphate 114, 484
Phosphinothricin acetyltransferase 454
Phosphoglycerate mutase 253
3-Phosphoglycerate 253
Phospholipid 231

Phosphoprotein 231
Phosphoprotein (9 kDa) 107
Phosphorylation of proteins 120
Photoinhibition 97, 107
Photoinhibition of photosynthesis 484
Photoperiod 387
Photoprotection 97
Photorespiration 407, 468
Photosynthesis 1, 88, 313, 320, 332, 407
Photosystem II core (phosphorylation heterogeneity) 107
Phototropism 120
Picea 387
Pinus 536
Pisum 241
Pisum (cation uptake) 555
Pisum (cell wall) 369, 379
Pisum (glycolysis) 439
Pisum (plastid) 17
Pisum (polysaccharide synthase) 206
Plasma membrane 44, 151, 221, 491, 525
Plasma membrane reductase 555
Plasma membrane (root) 297
Plasma-membrane H^+-ATPase 433
Plasmodesma 88
Plastid DNA 25
Plastid inheritance 143
Plastid (pea embryo) 17
Plastid (root) 439
Polymerase chain reaction 498
Post-illumination burst 407
Posttranscriptional regulation 305
Pressure probe (cell and root) 263
Protein (cell wall extension inducing) 327
Protein kinase 231
Protochlorophyllide reduction 536
Proton excretion 284
Proton flux 546
Proton pump (membrane density) 44
Protoplast 454
Protoplast surface 525
Pyrophosphate 446

Raffinose 387
Raphanus 525
Reflection coefficient 474
Relative growth rate 1
Rhizobium 415
Ribulose-1,5-bisphosphate carboxylase-oxygenase 1, 332
Ricinus 446
Ricinus seedling 114
Rieske iron/sulfur protein 305
RNA, tissue-specific 241
Root 387
Root (plastid, glycolysis) 439
Root pressure 127
Root pressure probe 474

Salt stress 221, 519
Saprolegnia 426
Secale 484
Serine hydroxymethyltransferase (localization) 468
Sieve tube sap 114
Sinapis 71
Solanum 32, 156, 166, 247
Spinacia 231, 313, 320, 498
Starch synthesis 17
Succinate oxidation 51
Sucrose 387
Sucrose metabolism 156, 166
Sucrose synthase 446
Sucrose synthesis 51
Sucrose-phosphate synthase (cDNA) 498
Sulphate transport (carrier, derepression) 297
Symbiosis 415
Symport 297
Synchronization 190
Synthase solubilization 206

Target site resistance 176
Thigmonasticity 58
Tissue culture (in vitro competence) 10
Tobacco mosaic virus 88
Tonoplast 491
Transformation (selection) 454
Transgenic plant (tobacco antisense DNA) 1, 332
Transgenic potato 247
Transgenic tobacco 88
Transport 446
Triticum 10
Turgor pressure 263, 426

Ulva (photosynthesis) 97
Uridinediphosphate glucose pyrophosphorylase 247
Uronic acid 227
Urtica (cytokinin, nitrogen) 511

Vacuole (Pi content) 519
Vigna 151
Vigna epicotyl 284
Vitis (water transport) 393

Water transport 393
Water transport (axial) 263
Water-oxidizing complex 305
Wound reaction 127

Xylem maturation 263
Xylem sap (cytokinin content) 511
Xyloglucan endotransglycosylase 327

Zea 120, 127, 313
Zea (root, water) 474
Zea (transformed protoplasts) 454
Zea (water transport) 263

Subject index

abscisic acid 289
acacia gum 528, 529
acclimation protocol 347
Acer pseudoplatanus 75ff
acetyl-CoA 253, 257, 259
acetyl-coenzyme A carboxylase 176ff
–, activity 180
–, inhibition by herbicides 180
Achlya bisexualis 426ff
acid-growth theory 547, 553
acid-induced growth 331
adenine-nucleotide translocator 51
aleurone 289ff
alfalfa 143ff, 415ff
alkalinization 519, 522
amino-acid sequence 65, 68
amino acids 237, 253, 258ff
–, synthesis 22, 23
1-aminobenzotriazole 182ff
1-aminocyclopropane-1-carboxylic acid oxidase 65ff
–, biochemical 67
–, extraction 66
–, purification 67
amiprophos-methyl 190ff
ammonia accumulation 454, 455, 458
α-amylase 289, 294, 295
Anabaena 203, 205
anaerobic conditions 474ff
anthocyanin accumulation 459ff
– biosynthetic pathway 461ff
anthracnose 459, 461
Antirrhinum majus 459
antisense *rbc*S 1, 2, 332ff
– RNA 247ff, 305ff
aphidicolin 190ff
apical meristem 241ff
apoplast 127
apple-fruit 65
Arabidopsis 6, 7, 282
– *thaliana* 352
arabinogalactan-proteins 221ff, 525ff
aryloxyphenoxypropanoate herbicides 176ff
Atriplex nummularia 433ff
auxin 120, 126, 369ff, 379ff, 546, 547, 553
auxin-induced growth 284ff, 327, 331
Avena 355, 361
– *sativa* 284
azide 363ff
Azotobacter vinelandii 543
azuki bean 284ff, 327, 328

bafilomycin 293, 295
biomass allocation 1, 4
Blec RNA 241ff
blue light 120ff
Brassica 495
– *napus* 297ff
breakdown of wall material 369ff
bundle-sheath cells 468, 470ff

C_3 plants 272, 274, 321, 407ff
–, light activation 318
C_4 plants 274
–, light activation 318
C_3–C_4 intermediate species 468ff
Ca^{2+}, effects on salt stress 519ff
cable theory 263
calcium uptake 289ff
calcofluor-stained cell walls 356, 358, 427, 428
callose synthesis 447, 452
calmodulin 289ff
carbohydrate accumulation 3
– feeding 278
– metabolism 157, 247ff
– storage, regulation 6, 7
carbohydrates 71, 73
carbon allocation 88ff
– assimilation products 277, 278, 281
– isotope ratio (δ 13C) 271ff
– metabolism 88, 89, 93
carbonic anhydrase 407ff
carboxylation processes 271, 274
β-carotene synthesis 363ff
Casparian bands 127, 129, 130, 134, 135
catalase activity 363, 366
Catharanthus roseus 519, 522
cation uptake, regulation 555ff
cauliflower mosaic virus 247, 248, 250, 305, 308
cell expansion 221
– wall extension 327ff
– – growth 369
– – mass 379ff
– – structure 227, 230
cellulose 371, 373ff
– microfibrils 354ff
cereals, frost-hardened 484ff
Ceropegia dichotoma 271, 272
chalcone synthase 459ff
Chara 495, 496
– *corallina* 523
– *globularis* 491
chilling-acclimation-related proteins 346ff
Chlamydomonas 29
– *reinhardtii* 199ff, 543
chloramphenicol 98, 101, 102, 104, 105
chlorophenol red 454ff
chlorophyll biosynthetic pathways 536, 542, 543
– fluorescence 97ff, 337, 338, 343
– protein complex 107, 109ff
chlorophyllide formation 538
chloroplast development 253ff
– envelope 231ff
chloroplastic carbon metabolism 253
chloroplasts of barley/spinach 258, 259
– of pea 231, 232, 238
chlorotoluron 182ff
Cholodny-Went hypothesis 546
Cirsium horridulum 58ff
citrate 151, 154, 155
CO_2 assimilation rates 318
– compensation point 468
– fixation 271ff, 277ff
– production 407ff
cold acclimation 346ff
– adaptation 387, 388
coleoptile tip(s) of maize 120, 121
composite transport model of the root 475, 482
copper, induction and reduction 555ff
cotyledon mitochondria of cucumber 51ff
Crassula argentea 271ff
Crassulacean acid metabolism (CAM) 271ff
cross-resistance 176, 183, 188, 189
Cucumis sativus 51ff, 327ff
Cucurbita pepo 447, 452, 491, 494, 495
cuticle 58, 63
cyanobacteria 297, 298
cyclohexanedione herbicides 176ff
cytochalasin-B 190ff
cytochrome b/f complex 305, 311
cytokinin 511ff
–, influence of low nitrate supply 514ff
–, influence of the nitrogen status 517
cytosolic ATP demand 55
– enzyme(s) 255ff

Daucus carota 534
– *muricatus* 150
defence system 415ff
dicarboxylate-uptake system 51, 56
Dictyostelium discoideum 247
dithiothreitol (DTT) 98ff
diurnal carbohydrate turnover 3, 6
Dunaliella bardawil 363ff
– *parva* 363
– *salina* 363, 367

Echeveria colorata 271, 272
Echinochloa crus-galli 179
egg cell structure of *Medicago* 143ff
elastic modulus of thistle filaments 61
elasticity 58ff
embryogenesis 150
endodermis 127ff
endoplasmatic reticulum 289ff
endotransglycosylase theory 328
enzyme activities in phloem 448, 450, 452
enzymes, glycolytic 439ff
epicotyl(s) of pea 206ff
– of *Vigna* 284ff
epicuticular wax 383, 384
